Attachment 2 – Proposal Narrative

Instructions: The following information should be fully explained in your organization's proposal response. Be advised, your narrative is limited to an absolute maximum of twelve (12) pages. How the total page limit is utilized is at your discretion as the Respondent. Each category represents a weighted portion expressed in an overall percentage of your proposal's score.

Qualifications, Experience, and Capacity - 25%

1. Provide a brief overview of your organization, including its history, organizational and management structure, technical capabilities, geographic service coverage, staffing resources, and overall capacity to provide the services required by this RFP. Describe your organization's ability to maintain sufficient staffing and technical resources to support DHS while simultaneously supporting other customers and projects.
2. Describe your organization's documented experience providing access control installation, maintenance, preventive maintenance, repair, troubleshooting, programming, system expansion, software support, and related services for environments comparable in size and complexity to DHS.
3. Identify the key personnel proposed to support the DHS account and describe their proposed roles and responsibilities, qualifications, technical certifications, licenses, years of relevant experience, and supervisory structure. Identify personnel responsible for routine technical support, emergency response, technical escalation, project implementation, and account management. Provide resumes or professional qualifications for the identified key technical personnel part of the RFP Response (Resumes and Professional qualification documents are not included in the 12 pages limit).
4. Describe your organization's current manufacturer authorization, partnership status, technical certifications, and personnel certifications applicable to the existing DHS LenelS2 NetBox environment. Confirm your organization's ability to satisfy the minimum technical qualifications identified in this RFP and provide supporting documentation as part of RFP Response (Organization technical qualifications such as licenses and certification documents are not included in the 12 pages limit). Identify any additional manufacturer certifications or technical qualifications relevant to the services contemplated under this RFP.
5. Describe your organization's experience assuming responsibility for an existing access control environment while retaining and supporting the customer's installed platform and serviceable infrastructure. Provide examples demonstrating your organization's ability to support, maintain, troubleshoot, expand, and upgrade an existing access control environment without requiring replacement of the underlying platform.

Technical Service Delivery and Implementation - 35%

1. Describe your proposed technical service delivery approach for meeting the requirements of this RFP, including: Routine maintenance, preventive maintenance, troubleshooting, repairs, system programming, emergency response, system upgrades, equipment replacement, project work, and ongoing technical support. Explain how work will be received, assigned, escalated, tracked, completed, documented, and communicated to DHS.
2. Identify material technical, staffing, supply-chain, equipment lifecycle, manufacturer, or operational risks you anticipate in supporting the DHS environment. Describe how your organization would identify, communicate, mitigate, and manage those risks while maintaining system availability and continuity of operations.
3. Provide a detailed transition plan describing how your organization would assume responsibility for the existing DHS access control environment, if a transition of control/responsibility is required, through full operational responsibility and independent support capability.

   At a minimum, describe your approach to:

   System familiarization; equipment and configuration inventory; review and validation of existing documentation; establishment of required system and manufacturer access; credential and administrative access transition; verification of system functionality; identification of outstanding deficiencies; knowledge transfer; coordination with City contracted provider(s), where necessary; and establishment of independent technical support capability.

   Identify any information, documentation, system access, manufacturer assistance, or third-party provider cooperation your organization anticipates requiring.

   Identify the anticipated amount of time required from contract commencement to full operational responsibility.

   Describe how your organization will maintain required services, system availability, KPIs, and service-level requirements throughout the transition period.
4. Describe your organization's 24/7 emergency support model. Include how DHS will initiate an emergency request; how requests are acknowledged; availability of telephone and electronic support; remote technical support capabilities; after-hours staffing; on-site dispatch procedures; technical escalation; management escalation; manufacturer escalation; and procedures for incidents requiring multiple technical resources. Explain how your organization will meet the acknowledgment, response, restoration, and communication requirements established in this RFP.
5. Describe how your organization will maintain sufficient technical capacity to support DHS during routine operations, concurrent projects, planned construction, major system modifications, emergency conditions, periods of increased service demand, and absences or unavailability of primary assigned personnel. Describe the backup resources available if the personnel normally assigned to DHS are unavailable.

Performance, Lifecycle Management, Cybersecurity, and Contract Support - 20%

1. Describe how your organization will manage, measure, document, and report its performance against the KPIs and service-level requirements established in this RFP. Describe how missed service levels will be identified, escalated, analyzed, and corrected.
2. Describe your approach to preventive maintenance and lifecycle management for the existing DHS access control environment. Explain how your organization will identify failing, obsolete, unsupported, or end-of-life components; maintain equipment and system inventories; identify emerging lifecycle risks; prioritize recommended replacements; and provide DHS sufficient information for lifecycle and budget planning.
3. Describe how your organization will document maintenance, repairs, programming changes, equipment replacements, system modifications, software upgrades, projects, and other work performed under the contract. Describe your ability to provide DHS with system reports and audit information, including administrative activity, access history, system changes, and other available audit records supported by the installed platform. Describe how system documentation will be maintained and provided to DHS throughout the contract.
4. Describe your organization's cybersecurity and secure remote-support practices for physical security systems connected to customer networks. Address credential management, privileged access, remote connectivity, account management, software and firmware updates, vulnerability remediation, change management, cybersecurity incident notification, and coordination with the City's appropriate technology and cybersecurity personnel.
5. Describe your proposed account management structure and how your organization will communicate system conditions, open service issues, recurring problems, lifecycle concerns, upcoming manufacturer changes, project status, and opportunities for system improvement to DHS. Explain how recurring technical problems will be identified and addressed rather than repeatedly repaired without resolution of the underlying cause.

Proposed Budget and Pricing Narrative - 20%

1. Describe your organization's proposed pricing structure for providing the services required by this RFP. Explain how labor, recurring support, software or manufacturer support, equipment and materials, emergency services, project management, and other applicable charges are structured. The pricing described in this narrative must correspond with the pricing submitted in the City's required Budget and Pricing Attachment.
2. Explain the proposed labor-rate structure, including applicable personnel classifications and any differences between regular business hours, after-hours service, emergency service, weekends, holidays, remote support, project management, engineering, programming, or other labor categories. Identify any minimum service charges, minimum billable hours, mobilization charges, travel charges, or other conditions affecting the amount ultimately invoiced to the City.
3. Describe your proposed pricing methodology for equipment, materials, and replacement components. Identify proposed discounts from manufacturer MSRP, published list price, or other established pricing basis, as applicable. Identify whether discounts vary by manufacturer, equipment category, purchase volume, or other conditions.

4. Based upon the existing DHS system information provided through this solicitation, identify and explain your proposed recurring monthly and annual cost for ongoing support of the existing DHS access control environment (Approximately 207 controlled access points and approximately 40 panic/duress devices). Clearly identify the services included in the recurring cost and any services, licenses, manufacturer support agreements, software support, maintenance, or other expenses that would be separately billed.
    - Preferrable: Costs/rates shall be provided on a tier basis for flexibility of ongoing building and access point changes. Examples:
        - $6,550/month – Up to 210 controlled access points and up to 50 panic devices
        - $7,050/month – Up to 240 controlled access points and up to 60 panic devices
5. Describe any proposed annual price adjustments, escalation methodology, manufacturer pass-through increases, or other conditions that could affect pricing during the contract term. Clearly identify which proposed rates or discounts would remain fixed, and which may change during the contract period.
6. Identify all material pricing assumptions, exclusions, dependencies, or conditions used in developing your proposed pricing. Respondents should not assume that services, equipment, licenses, travel, manufacturer support, or other costs will be separately reimbursed unless clearly identified in the proposal and permitted under the resulting agreement.
