Solicitation	26-52 - Fairgrounds Turfgrass Conversion
Buying Organization	Arapahoe County

No	Question/Answer	Question Date
Q1	**Question: Approved-equal for Tahoma 31** Greenlawn Sod & Turf respectfully requests approval of HighPoint Bermudagrass (OSU1337) as an approved equal to Tahoma 31 for this project. Developed at Oklahoma State University by Dr. Yanqi Wu and his breeding team, HighPoint is a sibling variety to Tahoma 31 that we have introduced into Colorado. Supporting performance characteristics include: Cold hardiness: Statistically comparable freeze tolerance in controlled LT50 testing, with similar post-winter green-up coverage in Northern Colorado field trials. Drought resilience: Comparable performance during a 47-day drought trial, with both varieties recovering to the same turf-quality rating. Traffic and wear tolerance: Similar turf quality, shear strength and spring green cover following 60 simulated cleat-traffic events. Turf quality: Dark green, fine-textured, dense turf, with blade width, mature density and fall color retention statistically similar to Tahoma 31. Spring recovery: Both varieties received an 8.0 spring green-up rating in 2018 testing at Goodwell, Oklahoma. Please advise on the documentation and submission process required for approved-equal consideration. **Answer:** Thank you for your question. Tahoma 31 Bermudagrass has been specifically approved by the State as part of the project's grant requirements. Therefore, substitutions or approved equals, including HighPoint Bermudagrass (OSU1337), will not be accepted for this solicitation. The County appreciates the information provided regarding HighPoint Bermudagrass and may reach out after the solicitation process is complete to learn more about the product for potential future use.	10/03/2026
